

sensilia

The richness of a simple, intuitive and tactile digital universe.

Sensilia is a digital companion designed for a social use. It encourages sharing with family members and the nursing staff and enhances well-being.

The device is made for elderly users who don't master personal computers and whose social network is weakening due to the estrangement and geographical distancing from relatives. It is mostly appreciated in collective dwellings such as retirement homes, nursing homes, senior citizens gatherings...

Its entirely tactile interface is designed for novice users, its logging in process simplified by the use of RFID cards both make Sensilia a service that is simple of use, intuitive and user-friendly. Anyone can learn to master it in a few minutes with no help.

Keeping in touch with family and friends is a key factor to the continuity of a social life. Such a link helps prevent elderly isolation.

Uses

Sensilia offers its users an array of services that covers the major part of their expectations at home as well as in collective care centers. Whether they need to communicate, to share or debate, to be diverted or informed, Sensilia holds a service for it.

Sensilia makes it easy to share messages and photos with one's relatives. Sensilia thus helps its users to remain close to their relatives and foster social links.

These interactions are performed autonomously by users according to their own will. They add meaning to one's life.

Sensilia helps users manage their time. The schedule of medical and nursing staff interventions is updated in real time on the device. Users can also manage their personal appointments, create their own reminders and receives those sent by their relatives.

On the interface, each day is represented graphically in a way that provides a simple and comprehensive vision of the day's schedule.

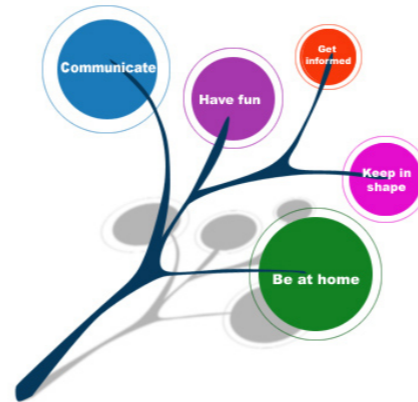

Sensilia is connected to the Internet. A simple touch of the screen gives an intuitive access to online press and radios. Staying informed and in touch with the world and its distractions can now be done without having to perform complex actions and without risking failure.

Simplicity

Fully tactile, Sensilia uses no keyboard nor mouse. Thorough studies have been conducted to design a tactile interface that makes for an intuitive user experience with no learning curve. Simple intuitive movements will give access to all the services.

Buttons and navigation tools were designed with a non-experienced user in mind and they are sized to allow for a possible lack of accuracy in the movements.

Sensilia is equipped with a contactless card reader that allows users to log in and out of their personal Sensilia account simply by waving their card in front of the device. The same simple move also gives users access to their own digital content and lifts all apprehension towards the use of technological devices.

An innovative device that valorizes the services offered by foster homes and enhances the autonomy of occupants

The feeling of isolation, the loosening of friendships and family ties are part of what can make life in a retirement community painful.

Sensilia provides a way to answer efficiently to the necessity of maintaining social connections. It offers an innovative service to the occupants of nursing homes, retirement houses, assisted living facilities...

That service can be deployed in the shape of a collective space, of a consulting area. It allows the facility to answer, at lower costs, to the expectation of residents with a differentiating offer.

The device can also be made private and installed into the rooms of the residents.

Sensilia can be customized to fit the particularities and needs of each facility and allows it to monetize the service and generate an additional income.

The organization of each foster home is unique and Sensilia adapts to every one of their needs.

All the modules, as well as the communication intranet assigned to the nursing staff can be modified or fitted to any demand.

The chosen technology allows to customize the service (functionality, design...) for each facility while reducing the costs of customization.

Specific services such as – for example – customized calendars or an application for the management of the nursing staff can be developed on demand.

Sensilia is also available brand-free ; its interfaces and features can thus be adapted to the colors of your facility, group or sponsor in order to make it a vehicle of valorization for the brand.
